

BUSINESS SERVICES SOLUTION NOTE

PROLIPHIX ADVANTAGES

- Rapid ROI – measured in weeks not years
- Easy to install – connects to existing HVAC equipment and computer data network in minutes
- Simple to operate – no special skills or training required
- Inherently scalable – add facilities without deploying additional servers

BENEFITS

- Combat skyrocketing energy costs
- Maintain central control – prevent employees from overriding thermostat settings
- Eliminate waste – conserve energy by aligning building climate with operating hours
- Reduce HVAC maintenance costs with real-time alarm notification
- Improve customer and worker surroundings by maintaining comfortable settings
- Help improve the environment – cut greenhouse emissions

FEATURES

- Universal management with optional UniVista remote management
- Intuitive Browser-based remote control interface
- Email and SMS text message alarms
- Secure Internet monitoring and control
- Multi-year scheduling
- UL and ENERGY STAR Rated

Businesses reduce energy costs and cut greenhouse gases with Proliphix Network Thermostats

Businesses of all types are feeling the effects of rising energy prices. Oil, electricity, and natural gas prices are all at historic levels, resulting in record heating, cooling and lighting costs. Not surprisingly, a 2008 Deloitte study listed rising energy costs as one of the top challenges facing businesses today, along with globalization, environmental sustainability, and rising health care costs.

Businesses must find new ways to eliminate energy waste and reduce energy costs while doing their part to sustain the environment. Improving control of HVAC systems is a great way to start. Heating and cooling account for a large share of business energy use.

That's why forward-looking retailers are leveraging Proliphix Network Thermostats to slash energy costs and reduce waste. For not much more than the price of a programmable thermostat solution, Proliphix allows businesses to dramatically reduce their heating and cooling expenses by remotely managing their HVAC systems over the Internet.

Proliphix Network Thermostats are easy to install and operate and are designed to work with the most widely-deployed HVAC equipment. Just connect the Network Thermostat to your existing HVAC systems and your computer data network. With Proliphix you're up and running in minutes.

Enjoy the convenience of programming all thermostats from any location using a secure Internet connection. Unlike cryptic programmable thermostats, Proliphix features an intuitive Browser-based user interface that makes management and control simple and convenient - no technical skills or training required. The unique calendar feature lets you quickly and easily configure heating and cooling settings for business and non-business hours. And the Network Thermostat's unique button lockout feature prevents employees from overriding thermostat settings.

Receive immediate notification of critical HVAC alarms wherever you are via email or SMS text messages. By promptly identifying and resolving HVAC problems, you can keep your HVAC equipment operating efficiently - reducing energy and repair bills, while maintaining a comfortable environment.

With the optional UniVista remote management solution you can program and manage hundreds of remote thermostats in unison – saving time and money. With Proliphix you can enjoy all the features, benefits and convenience of an Internet-managed energy control solution, for not much more than the price of a programmable thermostat solution.

In times of rising energy costs, shrinking profit margins, and increasing environmental awareness innovative businesses are using Proliphix Network Thermostats to help improve profit margins, conserve energy and cut greenhouse emissions.

"Proliphix helps us reduce our energy bills, while making us a greener company." CEO, leading business service
